# Glass installation training

## For technical operating staff

Büchi glass pilot plants are designed and manufactured for long-lasting operation in the chemical and pharmaceutical industry. Our products comply with current guidelines, standards and regulations of industry and authorities.

With this training we offer our customers the opportunity to get familiar with various subjects in glass plant engineering with the goal of being able to service and maintain glass plants largely by themselves.

The unique buchiflex flexible glass joint facilitates the maintenance of our glass plants and greatly reduces downtime. Maintenance of our glass plants as well as other subjects will be reviewed and trained as practical hands-on examples.

The following topics are included in the instruction:

- Glass catalog, products and material
- Glass construction training at training facilities
- ATEX
- Automation

Special trainings for maintenance of shell and tube heat exchangers etc. will be held upon request.

<b>Location</b>	at Büchi AG in Uster, close to Zürich
<b>Cost</b>	CHF 850.00, incl. training documents and meals
<b>Duration</b>	2 days
<b>Dates</b>	28./29.05.2024 in English 30./31.05.2024 and 03./04.06.2024 in German
